EXPERIENCE

Padova Neuroscience Center - PNC / UniPD

Feb. 2026 – Sep. 2026

Deep Learning Engineer

Padova, Veneto, Italy (Hybrid)

- **Project:** Anatomical-Aware Self-Supervised Learning for Clinical Phenotype Clustering.
- Contributed to the EU-funded HEREDITARY Project by developing a CNN-ViT encoder-only architecture network capable of learning anatomically localized representations from medical images.

Università degli Studi "Gabriele d'Annunzio"

Dec. 2023 – Feb. 2024

Student Intern

Pescara, Abruzzo, Italy (On-site)

- Segmented diagnostic CT scan images to extract anatomical regions of interest using ITK-SNAP software and analyzed them via FEA using COMSOL Multiphysics.
- Documented technical processes, workflows, and analytical findings in a comprehensive internship report.

EDUCATION

University of Padua

Sep. 2024 – Sep. 2026

Master's Degree, Biomedical/Medical Engineering

Padova, Italy

- **GPA:** 3.6
- **Relevant Coursework:** Deep Learning applied to Neuroscience, Biosensors, Advanced bio-signal analysis, Neuro-robotics, Imaging for Neuroscience.

Università degli Studi "Gabriele d'Annunzio"

Oct. 2021 – Jul. 2024

Bachelor's Degree, Bioengineering and Biomedical Engineering

Pescara, Italy

- **Grade:** 101/110
- **Experimental Thesis:** Modeling and finite element analysis (FEA) of a lumbar vertebra: comparison between healthy and pathological cases.

CERTIFICATIONS

- **C1 Advanced (CAE)** – Cambridge Assessment English (2020)

SKILLS

Coding Skills : Python (NumPy, PyTorch, TensorFlow), R (Caret, GBM) Dart (Flutter), TeX (LateX)

Software Skills : COMSOL Multiphysics (FEA modeling and Biomechanics), ITK-SNAP (Medical Image segmentation),

MATLAB (data analysis and signal processing), Robot Operating System (ROS), Microsoft Office 365 (Excel, Word)

PROJECTS

Clinical NLP - Medical Transcription Classification | Project Lead | [GitHub](#)

- Engineered an end-to-end NLP pipeline using PyTorch and Transformers (Bio-ClinicalBERT) to perform multi-class classification of medical transcriptions into 13+ distinct specialties.
- Implemented a custom "Focal loss" function and accelerated CUDA training loops using mixed-precision (AMP) to achieve a 91% top-3-accuracy, validated via Precision-Recall curves.
